Automating Google Chrome in Kiosk Mode Using Selenium

This guide demonstrates how to automate the opening of Google Chrome, log into a website, and open it in kiosk mode using Selenium in Python.

Requirements:

1. Python installed on your system.

Link: https://www.python.org/downloads/release/python-3130/

2. Selenium installed (use 'pip install selenium').

Open CMD Run as Administrator

Type "cd C:\Users\user\AppData\Local\Programs\Python\Python313\Scripts"

Type "Pip install selenium"

3. Download the ChromeDriver matching your version of Chrome.

Link: https://storage.googleapis.com/chrome-for-testing-public/130.0.6723.69/win64/chromedriver-win64.zip
Extract to "C:\ChromeDriver\chromedriver\chromedriver-win64\chromedriver.exe"

4. Git Installation on your system.

Link: https://github.com/git-for-windows/git/releases/latest

Open CMD Run as Administrator

Type "cd C:\Users\user\AppData\Local\Programs\Python\Python313\Scripts"

Type "git clone https://github.com/zoidenis/kfc.toptani-script.git"

Python Script:

Here is the Python script that automates the process of opening Google Chrome, logging in, and enabling Kiosk Mode:

```
from selenium import webdriver
from selenium.webdriver.chrome.service import Service
from selenium.webdriver.chrome.options import Options
from selenium.webdriver.common.by import By
from selenium.webdriver.support.ui import WebDriverWait
from selenium.webdriver.support import expected_conditions as EC
import time

# Vendosni shtegun e ChromeDriver
driver_path = r'C:\ChromeDriver\chromedriver-win64\chromedriver.exe'
```

```
chrome options = Options()
chrome options.add experimental option("detach", True)
chrome options.add argument('--kiosk')
service = Service(driver path)
driver = webdriver.Chrome(service=service, options=chrome options)
driver.get("https://kfcal-live.iprojectdev.com/admin/")
time.sleep(3)
username field = WebDriverWait(driver, 10).until(
driver.execute_script("arguments[0].value = 'kds.toptani';", username_field)
password field = WebDriverWait(driver, 10).until(
driver.execute_script("arguments[0].value = '1234';", password_field)
submit button = WebDriverWait(driver, 15).until(
"//html/body/div[12]/form/table/tbody/tr[4]/td/div"))
submit button.click()
```

```
time.sleep(5)
target url = "https://kfcal-live.iprojectdev.com/admin/#/Orders monitor/1"
driver.get(target url)
time.sleep(5)
fullscreen button = WebDriverWait(driver, 15).until(
"//html/body/div[3]/div/div/div/div[6]/div[1]/div[1]/div[3]/ul/li/a/i"))
fullscreen_button.click()
time.sleep(5)
switch button = WebDriverWait(driver, 15).until(
"//html/body/div[3]/div/div/div/div[6]/div[1]/div[3]/div[2]/div[1]/div[5]/div[4]"))
switch button.click()
time.sleep(5)
tiles button = WebDriverWait(driver, 15).until(
"//html/body/div[3]/div/div/div/div[6]/div[1]/div[3]/div[2]/div[1]/div[5]/div[5]/div[3]
tiles button.click()
time.sleep(5)
```

```
switch button = WebDriverWait(driver, 15).until(
switch button.click()
time.sleep(5)
dropstore_button = WebDriverWait(driver, 15).until(
"//html/body/div[3]/div/div/div/div[6]/div[1]/div[3]/div[2]/div[1]/div[2]"))
dropstore button.click()
time.sleep(5)
options = WebDriverWait(driver, 10).until(
'select2-results')]//li"))
for option in options:
   if "44088702 - KFC Toptani" in option.text:
time.sleep(5)
dropmonitor button = WebDriverWait(driver, 15).until(
"//html/body/div[3]/div/div/div/div[6]/div[1]/div[3]/div[2]/div[1]/div[3]/div"))
```

Batch Script:

To automate updating and running the script, use the following batch (.bat) file. It pulls the latest version from GitHub and runs the Python script. Place it in Windows Startup to run it at each startup.

```
@echo off
REM Navigo në folderin ku ke klonuar depozitën
cd C:\Users\user\AppData\Local\Programs\Python\Python313\Scripts\kfc-scripts

REM Tërheq versionin më të fundit nga GitHub
git pull origin main

REM Ekzekuto skriptin Python
python kds.toptani-bucket.py

REM Mbaj dritaren të hapur për të parë rezultatet
pause
```

This setup will fetch updates from GitHub and run the script each time the PC starts.
